## Cost effective solution for real time localization of your optimized fleet

In real time keep track of your vehicle's entry or exit in your different branches or provide us with your geofences to send you an alert if out of boundaries.

Locate and access last position and history of vehicles by setting up alerts to trigger SMS messages in the event GPS tracker or battery are disconnected.

Keep track record of incidents per vehicle thanks to our easy to use damage reporting system, and share your "picture blog" to your personnel or with your customers.

MASSOUTRE LOCATIONS

“ OnYourMaps' EAGLe IoT Car Rental solution really helped in optimizing our business towards more cost-efficiency. Now, we localize lost vehicles with ease and index damages to our cars on one single interface, simple to use. Therefore, we have more transparency and can improve our services for our clients. It truly is a solution that deserves attention – it is rare to find such a reliable partner with competitive prices on the market. ”

## Your Challenges

### RENT OVERVIEW

No ability to know if a car has been returned or collected by a customer at any time during the day for a given branch due to important size and number of branches.

Results in missed opportunity to increase rental time for vehicles returned earlier by customers.

### RECORD LAST POSITION

No simple track record of vehicles' last position and history when stolen or lost allowing for efficient recovery, but instead resulting in avoidable costs to rental companies.

### DIFFERENTIATOR

Competitive market with independent companies entering into the market with new ideas and advanced technologies, requiring traditional rental companies to differentiate themselves with innovative and useful features enhancing customer journey.

## Our Solution

### GEOFENCING

Benefiting from our expertise in GIS ("Geospatial Information Systems") we offer a reliable and robust solution allowing to define your geofences on the system or to import them if you have them in-house to provide a seamless experience. With this data set-up in Eagle Car rental, you will be able to track at all time when a vehicle is IN or OUT of your branches.

### REAL-TIME VEHICLE LOCATION & ALERTS

All vehicles equipped with our GPS trackers will be sending their location amongst other valuable information to our systems, allowing to retrieve last position, vehicle movement status, history and set up alerts such as disconnected trackers or out of geofence.

### IMPROVED CUSTOMER EXPERIENCE

Differentiate yourself from other rental companies by offering service and digital tools such as vehicle current location sent over the air to their mobile phone the day of vehicle collection or when convenient.

### BUILT-IN INCIDENT REPORT

Our robust Eagle platform allows you to create and manage reports by storing "pictures blog" and additional details on our cloud system via our simple and user friendly interface. The reporting system lets you send all relevant information to your customer or any relevant destination of your choice in one click.

### APIs ACCESS

Eagle Car rental provides a large number of features accessible via our RESTful APIs allowing to create connectors with your current systems such as ERPs and close the gap with your new location based needs seamlessly.
